

ElectionNet™

Services and Information...Reformed

ElectionNet Suite

The High-Performance Voter Registration and Elections Management Solution. Offering the Flexibility and Technology Options You Need in Today's Marketplace.

With the Federal Election Reform Bill being passed, you need a high-performance voter registration system designed to provide data in real-time and comprehensive support for your election processes. You want the flexibility of a modular, integrated system. The solution you choose must meet these standards. The solution that satisfies these requirements is ElectionNet's Centralized Voter Registration System.

STATEWIDE IMPLEMENTATIONS

We Offer The Advantage of Experience

ElectionNet is the leading solution for voter registration and election management, with a winning track record of successful statewide implementations and proven results in:

CONNECTICUT replaced their legacy system with ElectionNet and became the first installed site for our product to support their two million registered voters in 169 towns for 600+ concurrent users and 718 polling places.

WEST VIRGINIA entered into contract with us in October 2003 to have in place by January 2004 a secure single centralized voter registration database housed in the Secretary of State's Office that meets state and federal requirements. We worked closely with the Secretary of State's Office in managing, executing and delivering ElectionNet's system, modules, data conversion, county rollout and training and training to support its 200+ concurrent users for their 1.4 million registered voters to provide a seamless transition to all of West Virginia's 55 counties.

OUR SOLUTION - ElectionNet Software

ElectionNet's Centralized Voter Registration system was designed to standardize and centralize the registration of voters throughout the state to support online voter registration using a centralized repository. It is a browser-based system with multiple security levels designed to decrease voter fraud by eliminating duplicate entry. Its modular integrated Java architecture lets you tailor your solution by licensing only the components you need today.

ElectionNet COMPONENTS SUPPORT:

- Voter Registration
- Precincting
- Election Results Management
- Poll Worker & Polling Place Management
- Redistricting
- GIS Interface
- Absentee Ballot Management
- Petition Management

BENEFITS

ElectionNet provides election officials with a unified solution for centralized voter registration and complete election systems management. From voter file management to absentee voting, the system is focused on the security and integrity of the election process. It is designed to automate virtually every aspect of election office operations to maximize productivity, increase efficiency, and standardize election workflow. ElectionNet complies with the federal requirements of the Help America Vote Act (HAVA) and National Voter Registration Act (NVRA). Some of its features include:

- ✓ The ability to share data with other offices within each county or municipality
- ✓ Interface with state agencies (DMV, Vitals Records, etc.)
- ✓ Facilitate a real-time statewide voter search to all authorized state election officials
- ✓ Detection of duplicate voters
- ✓ Provides voter validation and identification (unique identifiers)
- ✓ Supports digitized signatures and scanning of voter registration cards
- ✓ Integration of bar coding
- ✓ Address and street file capabilities
- ✓ USPS certified address library
- ✓ Provisions for rural and non-E911 addresses
- ✓ Provides many audit trails for cross-referencing
- ✓ Generating poll lists
- ✓ Petitioning/Nominations
- ✓ Provisional balloting
- ✓ Voter history information
- ✓ Special voter application processing
- ✓ Management reporting and standard/custom reports

What Our Clients Have To Say...

"Now clerks will get daily computer updates on voters to purge and add. Clerks also should be able to quickly tell if someone already is registered to vote anywhere in West Virginia."

—JAN CASTO, State of West Virginia

"It is wonderful to prevent voter fraud and protect the rights of voters. This is designed to protect one person, one vote."

—MARIA GREENSLADE, Deputy Secretary of State
State of Connecticut

ARCHITECTURE

The *ElectionNet* architecture offers scalability and provides platform choices according to your state's needs. It uses open technology standards to leverage the best of the breed technologies like Java, HTML, XML, PDF, and browser-based user interface. Our solution is compatible with most of the industry popular Java Application Servers including IBM WebSphere, BEA WebLogic, and Oracle Application Server 9i. Its user interface provides ease of use allowing end users that have a secure access, a username and password and Internet connection to get online quickly to process, report and retrieve information. Key features of the *ElectionNet* architecture include:

- ✓ Integration with DREs
- ✓ Seamlessly operates in Windows, Unix and MVS environments - scalable to RISC, SUN and IBM mainframe
- ✓ Easily upgradeable with a modular design, database driven business logic, customizable user interface
- ✓ Standard correspondence that supports multiple languages
- ✓ Browser-based thin client user interface; compatible with Internet Explorer 5.5+ or Netscape 6.0+
- ✓ Accessible over Internet, Intranet or Extranet
- ✓ Highly secure - supports popular encryption protocols
- ✓ Based on J2EE (Java 2 Enterprise Edition)
- ✓ Supports multiple databases and operating systems (MS SQL Server 2000, Oracle, DB2, Unix, and Windows 2000)
- ✓ Supports XML, messaging, and delimited file structures for external interfaces

OUR SERVICES

To ensure your success and ours we use the latest approaches and methodologies for project management, data conversion, system analysis, integration, change management, and help desk support to provide you with unparalleled service. We not only offer the best real-time browser-based solution but the best practices, training and subject matter experts in implementing such a solution.

With over 40 plus years of combined election experience and a deep understanding of the Help America Vote Act (HAVA) our team of Election Product Specialists know what it takes to rollout and delivers the best product and services from lessons learned. We are dedicated to improving statewide voter registration and election back-office operations.

Online Help

ElectionNet's online help facility was designed for quick and easy use directly from the application. It provides detailed screen and field definitions. In addition, it provides functional and technical documentation relating to the various components of the system.

Documentation and Education

ElectionNet's Centralized Voter Registration System comes with a complete set of user and technical manuals. Train-the-Trainer and classroom type education is available and customized to meet your state's specific needs. Our motto is "The Key to Success Begins with Learning."

OUR TEAM

PCC Technology Group entered into partnership with Covansys Corporation in 2003 to provide the best election reform technology team in the marketplace to provide end-to-end election reform solutions that address HAVA-compliant centralized voter registration, election results management and campaign finance reporting.
